

Newsletter launch

*The sole proprietorship Phasma Solutions in collaboration with Ehime University of Japan (professor Masafumi Jinno) and Toulouse Paul Sabatier University of France (professor Georges Zissis) announce the creation of an **electronic newsletter** targeting researchers and scientists in the field of lighting and light sources.*

Phasma Solutions

Dear Sir / Madame

Despite the circulation of various lighting newsletters from companies, societies and associations that contain information on new products, designs, architecture, exhibitions etc., we propose the creation of an e-newsletter that will contain information on **scientific results and developments** so that it becomes a powerful tool in the hands of the researcher that so far had to attend conferences and perform extensive literature searches in order to be updated.

The e-newsletter will be **shaped by the contributions** of the recipients and will be distributed to an extensive number of researcher and scientists around the world, active in the field of lighting and light sources. It will include recent paper publications (titles and journal), new patents granted and future events such as conferences and workshops. In the course of time new themes could be added depending on feedback.

Please forward this message to your colleagues in the field!

Phasma Solutions

We ask from **you, the recipient**, to send us your latest publication, news, event announcement, book, project result etc in titles and with a very short description to be added to the newsletter by the **15th of September 2008**.

The first e-newsletter to be sent will cover activities and publications that took place in 2008 and events for the remaining of the calendar year. The frequency of it will be decided based on the response it will receive.
